Application

Integration  
Dynamic  
Effective

**FREEWALL** offers the unique blend of modular space planning footprints with the flexibility of bespoke frontages, that are tailored to each customer's needs. The units can be designed to fit around elements within the building structure as well as keeping a fluid feel to the working environment. Many different levels of interaction and privacy can be incorporated not only within an office but to an individual wall of cupboards.

Stepped room dividing wall

The simple yet robust construction allows the units to be built quickly whilst offering unrivalled strength, stability and durability. The units are all made to fit exactly at the factory, eliminating time on site as well as minimising disruption, especially where buildings maybe already in occupation.

Application

Integration  
Dynamic  
Effective

It is paramount that there is an effective appraisal of the immediate and future needs of an organisation's storage requirements. **FREEWALL** can then be integrated into the demands of the workforce and the office environment. An example of this was the demand for more desk space whilst achieving faster access times to the filing. The solution was to use side opening and up and over tambours enabling the footprint in front of the units to be greatly reduced, providing an open face for document retrieval without chance of damage or injury through doors being left open.

Vertical tambours

Side opening tambours

Application

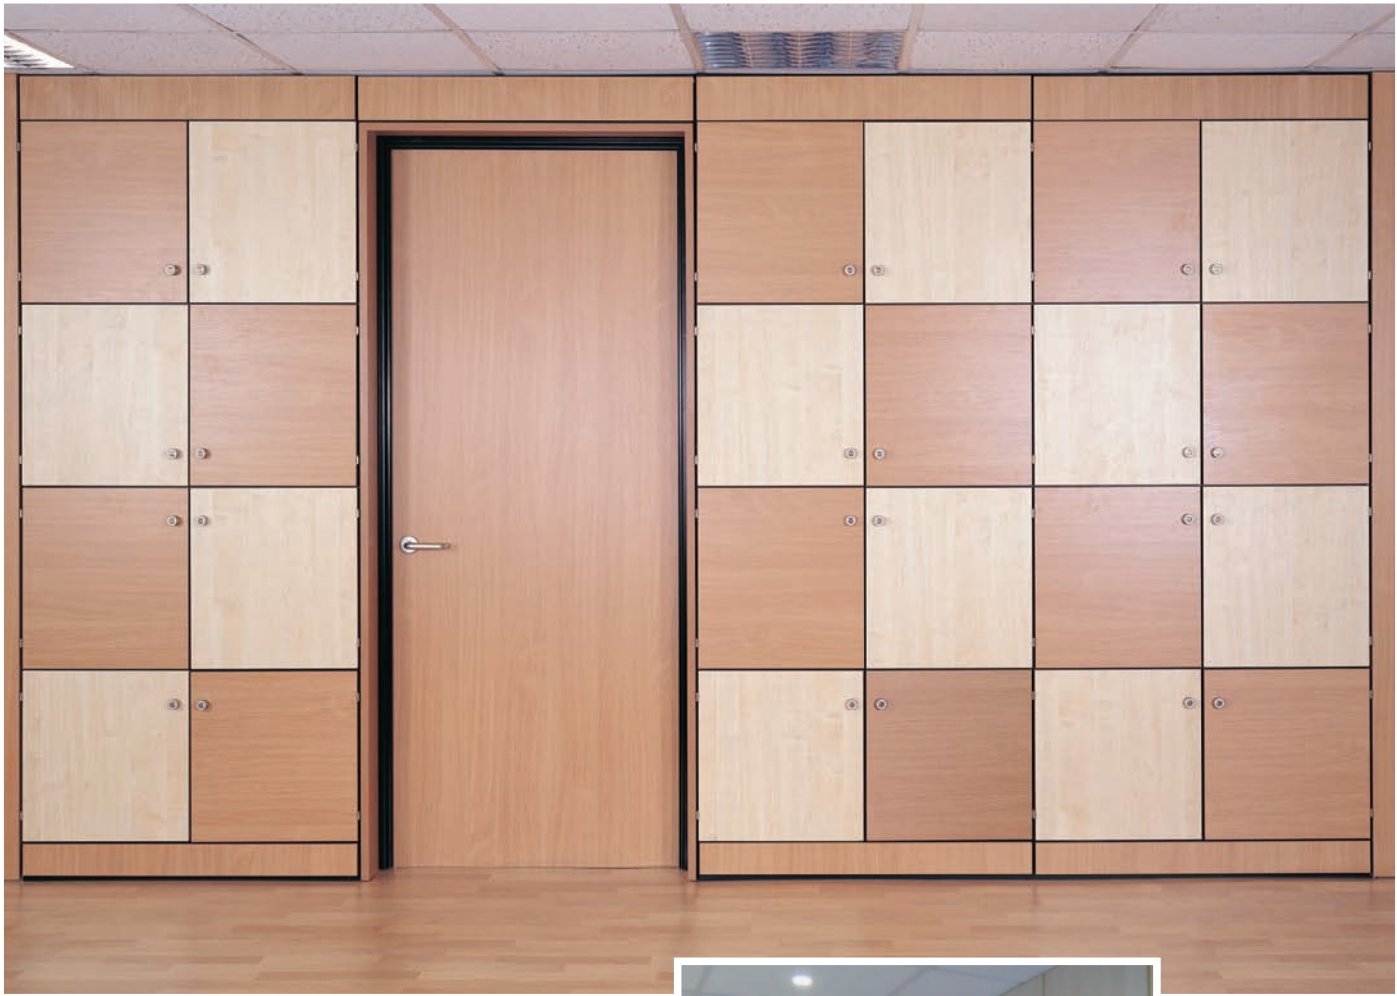

Library storage

**FREEWALL** offers solutions to new working practices in a way no other storage system can. The ability to change and meet these demands is achieved through the flexibility in design, versatility of the materials used and the quality of the fittings and components. This is shown in applications where units need to be capped at any height due to high ceilings or perimeter air conditioning vents. Also, the integration of different ways to access the stored material, such as bookcase sections for referenced material whilst incorporating low level cupboards for personal security.

Bookcase / cupboard storage

Locker units / pass thru door

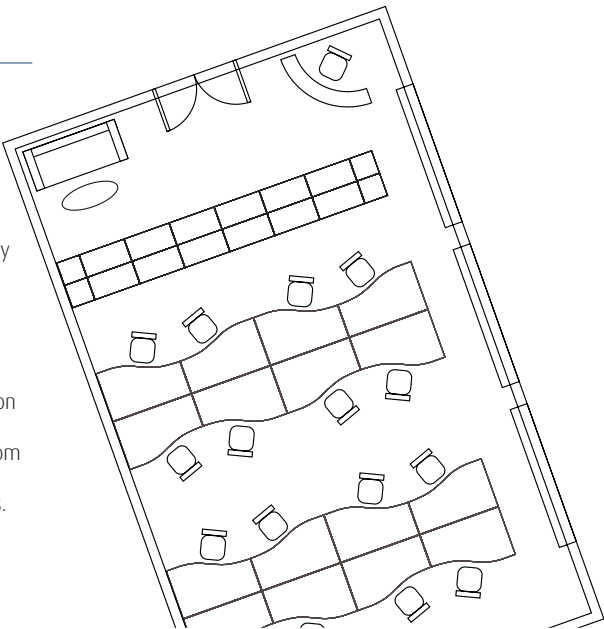

Locker units

The dynamic working practices of the modern organisation need flexible solutions. The improvements in technology and the introduction of flexible working, has put new demands on the office of today. **FREEWALL** can provide personnel with docking stations or lockers allowing a transient feel to their workspace. This enables a rationalisation of the number of workstations and resources needed as well as savings in floor space.

Integration  
Dynamic  
Effective

**FREEWALL** gives designers the freedom to create units that reflect the style of the company or environment. This can be achieved through bespoke units, contemporary material choice and fittings. This enables the customer to enhance the workplace and reinforce the company's identity. The realisation of this is shown through a range of visuals from simple line drawings to 3D computer graphics.

Wide open alcoves

Glass Doors

**FREEWALL'S** mix of modern manufacturing techniques and new materials has created an endless depth of design opportunities. The ethos of providing efficient storage solutions is not lost, simply enhanced. Wave and curve walls epitomise this trend, reflecting the styles of today's workstations and desks.

The clever contrast of different finishes enhances still further a modern and more fluid feel to any storage area.

When presented with a problem **FREEWALL** always projects the right image. In the boardroom, **FREEWALL** can harbour a host of facilities for professional presentations. Audio visual technology, plasmas screens, projector screens and video systems, dry wipe boards and flip charts are easily accessed whenever they are needed and swiftly concealed when the client meeting, training session or staff briefing ends. This imaginative and unobtrusive arrangement safeguards expensive equipment, adds security and guarantees that meeting areas remain business like at all times.
