

Mobile Refuelling and pumps

The regulations covering the movement of hazardous materials by road, including fuels, come under the international ADR rules. These govern how containers are made and approved, as well as who may transport them and how. Generally, up to 1000 litres of diesel or petrol may be transported in an approved container without the driver possessing a specific ADR licence. However,

under very specific circumstances, limited quantities of diesel may be transported by professionals in the normal course of their business. Up to 450 litres may be transported by a professional user if it is together with the vehicle or equipment to be refuelled, and if the container is checked for integrity and kept clean, tidy and secure an exemption from ADR may be claimed.

DT Mobile Easy [PG 4]

NEW

DT-Mobil Easy
200 l with
flap lid

DT-Mobil Easy 430 l
with 12 V electric
pump, automatic
delivery nozzle
and flap lid

Canisters [PG 4]

petrol

Rapidon 6 fuel can

For professional users, we have a 6 litre petrol canister in HDPE (UK regulations limit domestic users to 5 litres in a plastic container). This features an integrated, locking nozzle and trigger, which together will deliver a controlled amount of fuel into your machine without drips and spills.

With the Rapidon 6 canister, fuelling is as fast, simple and convenient as ever before. Precision control of the petrol flow is possible with the metering button:

- simply fold out to unlock.
- Press the button for controlled fuelling.
- Close by folding in. Finished.

No overflowing, no awkward handling, everything is simple and clean.

- Transparent 6-litre container with litre scale markings in the filling and discharge positions
- Pushbutton for valve control
- Filler neck with overview and vent – even for the smallest tank openings
- Robust design with double handle
- Large filler opening
- Outflow control via pushbutton – strong flow thanks to ventilation
- Impact protection
