FOOTBRIDGES

The factory have produced a strong but lightweight foot-bridge manufactured from aluminium that provides a solution to all requirements within the construction, groundwork, and event sectors.

These unique and innovative footbridges will provide safe, work and public access, whilst working over and around deep excavations, small rivers and streams, and utility trenches.

This Elite Footbridge has many additional safety features, including a unique 'diamond traction' non-slip surface. Along with lift handles they've also been manufactured with foldable handrails for easy transport, handling, and quick assembly. The Elite Footbridge can be stacked securely and can be supplied in 3 various sizes, 2m, 4m and 6m.

Alternative materials can often be extremely heavy and costly to transport, or have a short life span. At Elite Ground Support Services Ltd we believe that combining our skill in both engineering and fabrication, the Elite Footbridge is by far the most superior footbridge on the market to date.

Key Features and Technical Details

- Length – 2m, 4m and 6m
- Weight – 72kg, 142kg and 207kg
- Maximum weight distributed load – 1850kg, 1500kg and 850kg
- Material – Aluminium
- Unique 'diamond traction' non-slip surface
- Stackable for storage and transport
- Foldable handrails for easy transport and easy assembly
- Anodised aluminium handrails
- Lift handles/hooks
- High toe board
- Low transportation and handling costs
