

Rubbish Chutes

The Industrial range of chutes are produced from high quality prime MDPE – HDPE plastic which has high resistance to abrasion, giving you rigidity and strength on impacts in warm or cold conditions for complete safety.

Our chutes are available in 3 sizes, for maximum strength and rigidity all standard chutes are produced as one piece mouldings and have a channelled top rim which ensures each chute keeps in shape under load and come supplied with brackets, chain or wire rope complete and ready to be assembled on site.

20 Inch System

When erected this assembly becomes a flexible unit providing a versatile chute system. This system is ideal in situations where a rigid system is impractical. A welded galvanised bracket and chain assembly is supplied as a single unit so chains cannot be lost. Each chute and side entry section is supplied with a bracket and chain assembly. This system can be provided with a variety of accessories for quick and simple fixing in any situation i.e. from windows, scaffolding or flat roofs. The taper allows for easy stacking so reducing transport and storage costs.

22 Inch System

When erected this assembly becomes a semi-rigid unit providing strength and rigidity minimising damage and dust. The system is ideal in situations where a versatile system is impractical. A slight taper and increased diameter creates a more durable and essentially dust free system. Each chute and side entry section is supplied with a wire rope and snap hook assembly which allows for quick and easy connections to scaffolding without the need for additional accessories or frames.

30 Inch System

This system is suitable for larger debris which would block narrower chutes. The larger diameter semi rigid chute makes the removal of bulky materials easier as it provides over double the area of standard 20 inch rota chute. Each chute and side entry section is supplied with a wire rope and snap hook assembly which allows for quick and easy connections to scaffolding without the need for additional accessories or frames. All our designs are available with top hoppers and side entry hoppers suitable for multi level entry use. All chutes for transport and storage are stackable to their design. Universal scaffold frames suitable for all designs are also available. By producing all our products in house for quantity we are able to produce chutes in most colours.

Rubbish Chutes

Chain and Wire cable for replacement parts

Building & Construction

BENEFITS

- Chute sizes to accommodate all waste transfer
- Fitted safety brackets and chains
- Stackable design
- Highly resistant to abrasion
- Able to withstand extreme temperatures
- Compatible to fit most European chutes
- Easy to erect
- Produced from prime quality material
- One piece mouldings – no join seams

ACCESSORIES

- Replacement brackets, chains or wire can be supplied
- Universal scaffold frames available for standard chutes

All chutes are fitted with a heavy duty bracket, chains or wire allowing you the option to alter the length on a run of chutes but still hold locked in position securely.

Fixing frames to suit given chute size

Window mounting frame

Building Accessories

MIXING TRAY

Ideal for smaller mixing jobs and to contain any spillage of materials on site.

L 940mm W 940mm H 75mm

PLASTERERS BATH

Rotationally moulded plaster bath is strong yet lightweight, stackable and available in a variety of colours.

L 1115mm W 635mm H 305mm

ROTA BARROW

The new rota barrow is a durable version of the traditional wheel barrow. It has a one piece moulded structure with a robust pneumatic wheel. Its polyethylene body ensures it's a non-conductive product for the comfort and safety of the user. The rota barrow has a generous 75 litre capacity and is also available in a food grade option.

FLEXI BUCKETS

Tough and durable flexi bucket available in 2 sizes

- 20 Litre
- 40 Litre

25L STANDARD BUCKET

General purpose bucket

PLASTERERS BUCKET

Our rotationally moulded plaster bucket has a generous 40 litre capacity and is strong. Available in a variety of colours.

BUILDERS STEP

Rotationally moulded builders step provides a safe way to reach difficult to get to work areas. Ideal for indoor and outdoor use.
