

Self-levelling Units

Manufactured to order in the United Kingdom in a wide range of colours to match your company colours or for different areas. Please note that lead times are normally 6 weeks from order. Supplied by Merlin Industrial Products Ltd

Self-levelling units are ideally located in situations that require a worker to be bending and lifting in their work place. By using a self levelling unit the possibilities of a worker injuring their back are greatly reduced. The pantograph works by a scissor and spring system that is set at a pre-calculated rate. As objects are placed on the table top it lowers according to the weight, leaving the item at a reachable height. The reverse happens when removing objects from the unit, as objects are removed the table top rises, ensuring the items are always at the top of the unit to ease back problems in the work place.

The units can be housed in plastic or metal bodies either static or mobile.

These units are very versatile and can be adopted into many environments ranging from laundries, textile, engineering, coin movement, order picking areas etc, the possibilities are endless.

All of our units are true self levelling which means they will not jam even when loaded unevenly.

Please feel free to call to discuss your project / requirements.
