## Staging

Strong & lightweight construction  
Available in 4 heights  
Frame manufactured from 60 x 22mm solid maple  
12mm birch plywood top & legs  
A choice of carpet colours

This is a great looking, strong, lightweight and practical staging system suitable for school plays, performances and presentation events. All modules are available in four heights.

The platform frame is manufactured from 60 x 22mm solid maple, supported by 12mm birch plywood top & legs. Each module is carpeted with colour of your choice.

The system has been designed for easy assembly by children and staff. Set A takes a maximum of 20 minutes including the fitting and tightening of connection bolts provided for safe and secure set-up.

Take down and storage couldn't be easier, the legs fit neatly inside the top frame which can then be stored in the useful trolley, designed to hold all modules required for any of the three set options
