

SAFETY: DEFEND YOUR WORKFORCE WITH OUR IMPROVED ANTI-COLLAPSE MESH SYSTEM.

REDUCES ACCIDENTS

Creates a physical barrier to prevent accidents caused by dislodged goods falling on personnel.

MODULAR

rackGUARDIAN is a modular paneled system which can be configured to any racking structure.

FAST INSTALLATION

Fast and easy to install. Compatible with all major racking manufacturers.

ECONOMICAL

Suitable for all applications, budgets and safety needs.

DURABLE

Framed steel panels with a variety of finishes provide strength and durability for long lasting protection.

Ask about our **IMPROVED** rackGUARDIAN™ system.

- **Low Profile Design**

We have removed the wire mesh perimeter from the frame and increased the number of weld points to give a sleeker design, with improved strength.

- **Rapid Installation**

We have designed a unique stand-off bracket to allow installation from both sides of the mesh screen, thus reducing overall install time.

- **Industry Standard Sizes**

We listened to your feedback and brought our newly designed panels in line with industry-standard size, improving compatibility with existing systems.

Built to exceed the demands of a high traffic logistics operation, RackGUARDIAN Anti-Collapse Mesh (ACM) is a High-Strength Steel panelled protection system, which protects your workforce from serious injury or harm from falling product stored at height.

Mounted to the rear of a pallet racking system using a universal bracket, panels are configured in a brickwork pattern and installed to create a strong mesh screen capable of absorbing impacts up to 2500 joules.

Anti-Collapse is installed where there is a potential risk of falling predominantly along pallet racking parallel to walkways or in conjunction with STORGUARD partitioning system to create secure areas for hazardous products like aerosols and chemicals.

PANELS

Our lightweight panels feature a 20x20mm steel box section frame. Available in a full range of standard sizes, although bespoke options are always available.

APERTURES

Our versatile panels can be supplied in a 50x50mm steel wire mesh for standard applications, and 25x25mm mesh for more specialist applications, such as aerosol storage.

BRACKETS

Our universal stand-off brackets are compatible with all major manufacturers of pallet racking and longspan systems. These come in a range of sizes, from 50mm to 300mm to accommodate for pallet overhang.

EXTENSIONS

Our system is designed with flexibility in mind. Upright extensions can be supplied to allow your mesh screen to extend as much as 2000mm above the height of your racking.

FIXINGS

Our system is always supplied as a complete kit, including all required fixings for ease of installation.

FINISHES

All of our components are finished with a Semi-Gloss RAL 7035 (Light Grey) Powder-Coat as standard. Our in-house powder coating facility gives you the freedom to pick any colour you need to match the aesthetic of your warehouse. All-Weather finishes are also available for outdoor or freezer applications.
