

# WELCOME

With over 40 years experience of manufacturing in the contract furniture industry, the company offers a complete manufacturing solution for all of the Leisure, Hospitality and Health Care Markets. We work alongside the majority of the established contract furniture suppliers, producing all of their bespoke and mass produced product requirements taking the project from conception to completion.

Based in Manchester within a 50,000 square foot manufacturing facility the combination of our 50 employees and machinery including 3 cnc's, panel saws, planers and straight line edgers, produce top quality contract furniture at a competitive costing with a customer service expected in the industry.

Our range of manufacturing capabilities stem from any size table tops that include solid wood of varying depth, laminates of all styles and edge details and veneers where cost is the leading factor. The cutting equipment we have allows us to produce finished tops from materials such as compact laminates or 50mm thick solid wood table tops.

Any additional contract furniture services or manufacturing requirements you have need for can also be accommodated by our company. All additional products that complement our manufactured items can also be accommodated, by the use of our procurement department. This is due to our extensive knowledge of the contract furniture industry and the purchasing power we possess.

The company's environmental commitment guides the company to purchase from FSC and PEFC accredited panel sources where possible, and all solid timber is available from FSC and PEFC sources where requested at a slight premium in costing. The company even goes as far as re-cycling its solid waste wood and collected wood shaving for use in other industries.

Our environmental commitment even stems to the company operating an authorised wood coating process, under the government guideline PG6/33. This allows us to offer a comprehensive polishing service to the contract furniture market for all products we manufacture, as well as products sent to us for polishing only. The company recognises the continual need to develop your processes and understand your environmental responsibilities. As such the company is currently undertaking the accreditation process for ISO9001 for Quality Management and ISO 14001 for Environmental Management.

Our vehicle fleet also allows us to service all of the industries logistics requirements, and all of our manufacturing capabilities are backed up by a first class approach to customer service. Carlick's is a name and reputation developed over 40 years, providing you with quality products at a competitive costing with an all round service you can depend upon.
