

Merlin Industrial Products Ltd are proud to be official Distributors of the EcoGrid range of Porous Pavers.

EcoGrid is made from specifically selected recycled plastics to ensure they have increased strength and rigidity, which in turn provides an extensive lifespan compared to other grid alternatives.

Last year nearly 15 million grids were produced and were used for a variety of schemes all over the globe. EcoGrid has been in production for over 20 years and you can therefore imagine just how many projects we have as examples of quality, this is how we can offer a complete, 'no quibble' 20 year guarantee on the grids for all uses.

As a substitute for paving stones, asphalt and concrete, EcoGrid provides a cost effective and environmentally friendly solution for both home owners and contractors. Once installed they can be filled and finished with a choice of mixtures, ranging from pea shingle, decorative stone, or if required a soil and grass seed mix. EcoGrid Porous Pavers come in a variety of options with weight limits ranging from 160 tonnes per sqm to 500 tonnes per sqm filled, also a variety of colour's if required.

Please ask yourself, are you investing in a 6 month (or less) event or for a 30 year plus installation. In which case don't look at price, look at quality and value. EcoGrid costs up to 25% more on average than cheap imitations, however EcoGrid will last 500+ % longer.....so, to coin a phrase, it's a "no brainer" really!

Key Features and Technical Details

- Size: 330mm x 330mm
- Depth: 30mm, 40mm and 50mm
- Max Weight Loading: 500+ tonnes per sqm
- Material: High quality Recycled LDPE
- Life Span and Guarantee: 30+ years
- Colours: Black, Green and Terracotta
- Patented locking and connection system
- UV Stabilised
- CE Certified
- Not affected by extreme weather conditions
